

Apportionment Methods

10. A country has four states and 50 seats in the legislature. The population of each state is shown below.

State	A	B	C	D	Total
Population	1013	2542	2731	4004	10,290

- Determine each state's apportionment using Hamilton's method.
- Determine each state's apportionment using Jefferson's method.

10. A country has three states and 15 seats in the legislature. The population of each state is shown below.

State	A	B	C	Total
Population	5603	3245	2547	11,395

- Determine each state's apportionment using Hamilton's method.
- Determine each state's apportionment using Jefferson's method.

10. A country has four states and 40 seats in the legislature. The population of each state is shown below.

State	A	B	C	D	Total
Population	7800	4531	5122	3955	21,408

- Determine each state's apportionment using Hamilton's method.
- Determine each state's apportionment using Jefferson's method.
